

$\Lambda(2100)$ 7/2⁻ $I(J^P) = 0(\frac{7}{2}^-)$ Status: ***

Discovered by COOL 66 and by WOHL 66. Most of the results published before 1973 are now obsolete and have been omitted. They may be found in our 1982 edition Physics Letters **111B** 1 (1982).

This entry only includes results from partial-wave analyses. Parameters of peaks seen in cross sections and in invariant-mass distributions around 2100 MeV used to be listed in a separate entry immediately following. It may be found in our 1986 edition Physics Letters **170B** 1 (1986).

$\Lambda(2100)$ FOOTNOTES

¹ The NAKKASYAN 75 values are from the two best solutions found. Each has the $\Lambda(2100)$ and one additional resonance (P_3 or F_5).

² Note that the three for BACCARI 77 entries are for three different waves.

³ The published sign has been changed to be in accord with the baryon-first convention. The upper limit on the G_3 wave is 0.03.
